

# IPTECHVIEW™

## IPT-CAMGate Series

## Connecting Existing Cameras to the IPTECHVIEW™ Cloud for Simpler and Safer Access

Get immediate access to a powerful, yet simple-to-use cloud video surveillance platform

### A Unique Solution to Cloud-Enable Almost Any IP Camera

Give new life to legacy cameras with IPT-CAMGate, our on-premises integration bridge. IPT-CAMGate connects ONVIF-compatible cameras to the IPTECHVIEW cloud platform, adding modern video management, analytics, and AI capabilities—including advanced AI and computer vision features when using U2 CAMGate models.

The IPT-CAMGate detects all the cameras on its network and lets you add them to the customer's account. When connected to the platform, the cameras behave like any other certified camera on the IPTECHVIEW SURVEILLANCE platform and provide, among other things, cloud video storage, access to live streams, floor-plan camera views, customizable grids, and access on smartphones or computers.

- Easy plug & play cloud management
- Full access to GUI through IPTECHVIEW for live or playback video
- IPTECHVIEW AI Studio™ integration
- No fixed IP or port forwarding needed
- Rich monitoring and alerting rules

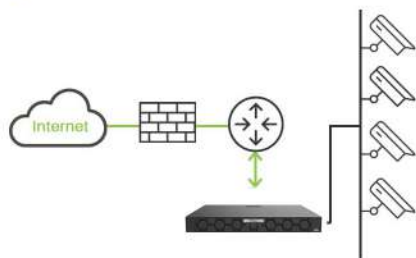

### Flexible Edge and Cloud Storage

CAMGate hardware can be configured with up to 32 TB of edge storage per unit. The IPTECHVIEW Cloud Player provides a seamless experience for viewing event-triggered and continuous recordings, whether they are stored locally or in the cloud.

Important event recordings can also be automatically uploaded to the cloud, extending their retention beyond local storage limitations. Simply select the cloud retention period that meets your operational and compliance needs.

## Seamless Integration: Stronger Security.

### IPTECHVIEW CAMGate

IPT-CAMGate creates a secure layer between your cameras and external networks. Cameras can be isolated from direct internet and corporate network access, helping reduce exposure to cybersecurity threats without limiting surveillance capabilities.

Authorized users can securely access live and recorded video through IPTECHVIEW's advanced cloud video surveillance platform—from virtually anywhere.
