

ABP Technology and IDIS America have joined to bring our Partners an IP Surveillance system that combines high quality and ease of installation. Using IDIS' DirectIP™ Technology removes IP addressing between recorders, switches, and cameras so technicians can bring their systems online faster and with less risk of mistakes configuring the network. It is easy to configure secure remote connections into the customer's network without involving the IT department or ISP due to blocked ports and NAT setup. In just a matter of minutes, and utilizing purpose built software with the reliability of Amazon Cloud Service, end-users will have connection to their systems from anywhere in the world without cumbersome configurations.

IDIS offers a full range of camera profiles ranging from mini-dome's to purpose built ANPR, and HD TVI systems up to 4K systems without different software or licenses. An entire hardware part's list can be built together inside of the IDIS catalog. By controlling and manufacturing everything from the camera through the NVR and to their 84" 4K digital signage displays, IDIS can remove the doubt of device interoperability. Every device will plug in and function without technical set up while all the system program or maintenance is designed to be done remotely. Built in system reports, automatic help and diagnostic checks, and complete functionality through an internet connection allows your service department to increase customer response time without having to dispatch technicians, and with 1,064 possible devices connected to the always-free software means every system you install is one click away.

DirectIPTM is an optimized HD Surveillance Solution, based on an IP Framework, consisting of IP Cameras, NVRs, Network Equipment and Client Software as a complete package.

Core Strengths of DirectIP™

CONVENIENCE

- Plug-and-Play
- Easy installation
- Intuitive and user-friendly interface

HIGH PERFORMANCE

- Real-time live monitoring with HD resolution
- Real-time recording with HD solution
- Pentaplex operation

COMPATIBILITY

- Closed and third party IP camera support
- Compatibility with legacy security systems

Low TCO

VALUE FOR MONEY

- High quality NVRs
- Lower installation fees
- Lower training and maintenance cost

INTEROPERABILITY

- Complete packages for network video security systems
- Rich connectivity option
- Device traceable network topology

ABP has selected this DEMO-NFR bundle to give you a fast and complete introduction into the world of IDIS. We begin with the IDIS DR-2308P 8-channel NVR at the core of the system, and then we branch out with three different styles of camera. The 5MP fisheye, DC-Y1514, works perfectly either on the ceiling of your sales floor or a wall in your lobby. Maximizing on the built-in and ultra easy de-warping controls you will start to see the power of this device quickly. Stepping outside we have the full HD, IR, and WDR bullet, DC-E3212WRX. Notice the bandwidth savings of the 1080P @ 30fps stream while using the native H.265 codec between the camera and NVR. Moving back inside with the small full HD and IR dome, DC-D3212RX, we want to see the ease of added these devices to the system; quick installation, almost no programming, and with H.265 compression we know you will be impressed.

ABP's webinars will help in showing you how to have your system up and running quicker than your lunch break. The client software is always a free download from IDIS for any number of client machines or mobile devices. Using the IDIS FEN service on your NVR you will be up and connected to your phone without having to involve your IT department.

☐ **IDIS DEMO-NFR Bundle - \$ 1,200**

- DR-2308P: 8-channel NVR
- DC-Y1514: 5MP Fisheye
- DC-E3212WRX: 2MP Outdoor Bullet
- DC-D3212RX: 2MP Indoor Dome

Additional items can purchased at 50% discount once per year. No maximum quantity, but no more than 2 of the same part number. Certain exclusions apply. Maximum order not to exceed \$6000 after discount.
