

# Epygi ACD Console (EAC)

- ❑ Privately held US corporation founded in 2000.
- ❑ More than 40 employees, a majority of them are support and R&D engineers.
- ❑ Product design in United States. All hardware and software is designed by Epygi, not Asterisk based.
- ❑ Software testing in Yerevan, Armenia.
- ❑ Headquarters in Plano, Texas.
- ❑ Good technical support.

## Channels and Sales

- ❑ Epygi sells products exclusively through resellers and integrators, not directly to the end consumer.
- ❑ Certified training offered for channels.
- ❑ Flexibility to create customized solutions for major OEM customers and products.
- ❑ Large installation base in North and South America, Australia, Africa and Europe.

# Benefits of Using Epygi

- ▣ Solutions tailored for SMBs. Compact and modular appliances.
- ▣ Software upgrades are free from the Channel Portal.
- ▣ Epygi IP PBXs are compatible with all major SIP telephones.
- ▣ Installation, setup and maintenance simplified with auto-configuration and straightforward GUI interface.
- ▣ Long standing reliability in the market.
- ▣ Competitively priced and stable IP PBXs and Gateways.
- ▣ Free limited technical support to qualified channels.
- ▣ Advanced call center functions ACD and EAC for the three models of PBX: QX50, QX200 and QX2000.

# Epygi IP PBX ACD Feature

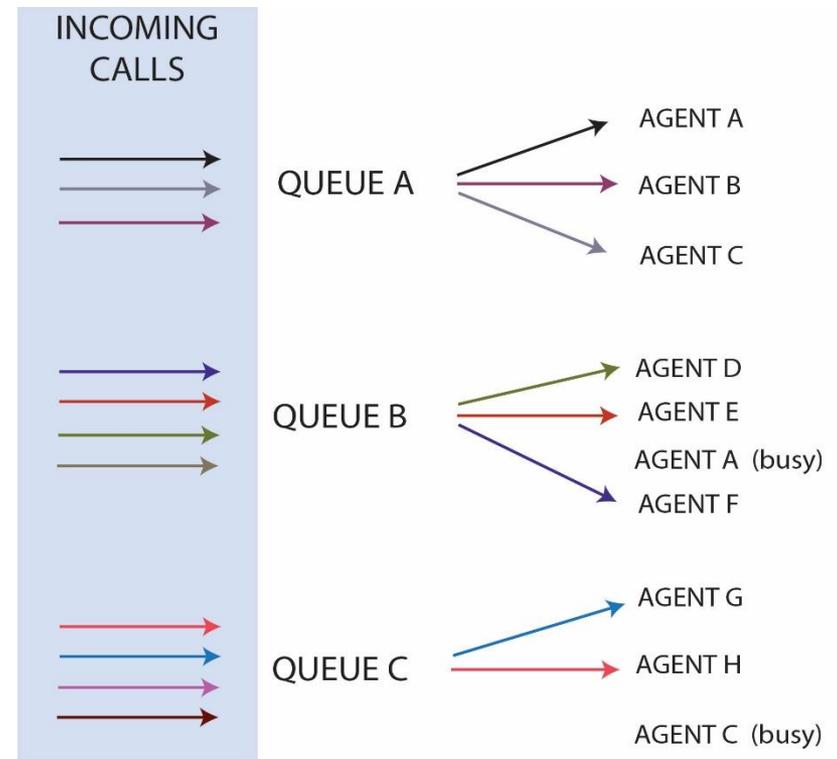

## Automatic Call Distribution (ACD)

is a licensable feature that allows queuing and automatic call distribution for incoming calls to contact center agents. Applicable to all QX IP PBXs. Designed to handle high volume of incoming calls with ease.

Can be used standalone or in combination with Epygi ACD Console (EAC)

Not used for outbound calls.

Unlimited number of agents.

# The ABC's of ACD Management

Epygi's ACD contact center solution is based on the following building blocks:

- ❑ **Agent** – A call center employee (user) that is reachable via the QX IP PBX.
- ❑ **ACD Queue** – The ACD queue manages the routing of designated calls as they are distributed amongst defined group of agents.
- ❑ **Interactive Voice Response System (IVR)** – IVR is an advanced, custom Auto Attendant on the QX IP PBX that prompts information from callers/customers. Based on the input the IVR will route the call to the proper ACD queue.
- ❑ **Epygi ACD Console (EAC) Web Application** – This application gives agents and supervisors full control of their call center. Agents can login, change their status, assign wrap-up codes, chat, and view their own statistics. Supervisors can monitor the queues, generate reports, chat with agents, and display the current status of the ACD queues and agents.

# ACD Call Management

- **ACD License** - a one time paid license to activate the ACD call distribution for incoming calls. No limit on number of agents or queues except PBX capacity limitations.
- **Multiple Agent Queues** - can be created to direct calls to the agents with the correct skills to help the caller. For example sales, support, accounting, etc.
- **Call Distribution Types:**
  - All Agent Ringing - Rings all agents simultaneously.
  - Round Robin - Sequentially tries to reach one agent at a time.
  - Longest Idle - Call is sent to the agent who has been idle the longest since their last call.
  - Less Busy During Last Half Hour - Averaged over the last 30 minutes. The agent that has been less busy will receive the call.
  - Random Hunting - The agents are selected at random.
  - Skills - The agent who has the highest composite skill grade will receive the call.
- **\$650 MSRP USD for QX50 and QX200**
- **\$2,500 MSRP USD for QX2000**

# ACD Call Management

- ❑ **Zero Out:** Callers can be given the option to dial “0” and be redirected.
- ❑ **Redirect:** Callers can be redirected to another extension or ACD Group if the call is not answered in the defined time.
- ❑ **Welcome Message:** Presented to the caller when they first enter the ACD queue.
- ❑ **Queue Message:** Presented to the caller periodically while they are waiting in the queue. User can specify the timeout to wait after each message and the number of times to repeat each message. Callers can hear music or a customized message in between informative messages by using:
  - .wav file
  - MP3 file using the Epygi Media Streamer

# Agent Configuration on QX

For each agent, the following parameters need to be established:

*Name, Status, Admin Privileges, Web and Phone*

*Authentication parameters*

*(Username and Password) and Calling Address*

**QX200**

# Queue Configuration on QX

For each queue the following parameters need to be established:

*Max Queue Size, Agent Ring Timeout, Queue Ring Timeout and Call Distribution Type (All Agent Ringing, Round Robin, Skills, etc.)*

The screenshot shows the QX200 management interface. The top navigation bar includes 'Overview', 'Extensions', 'Dialing Directories', 'Conferences', 'Recordings', 'Receptionist', 'ACD', and 'Authorized Phones'. The 'ACD' tab is active, and the sub-menu shows 'Queues', 'Agents', 'Status Codes', 'Wrap-up Codes', 'Skills', 'Archive', and 'Archiving Settings'. The main heading is 'ACD Management - Edit Queue'. A 'Go Back' button is visible. The left sidebar contains navigation options: Dashboard, Setup, Extensions, Interfaces, Telephony, Firewall, Network, Status, and Maintenance. The main content area is titled 'ACD Queue Settings - Technical Support (300)'. It features a sidebar with links for 'General Settings', 'SIP Settings', 'SIP Advanced Settings', 'ACD Queue Settings', and 'ACD Agents'. The 'ACD Queue Settings' section includes: 'Max Queue Size' (input: 20), 'Agent Ring Timeout' (input: 8, unit: sec), 'Queue Ring Timeout' (input: 300, unit: sec), 'Call Distribution Type' (dropdown menu with options: All Agent Ringing, Round Robin, Longest Idle, Less Busy during Last Hour, Random Hunting, Skills), an 'Enable Redirect' checkbox, 'Call Type' (input: Auto), and 'Redirect Address' (input field).

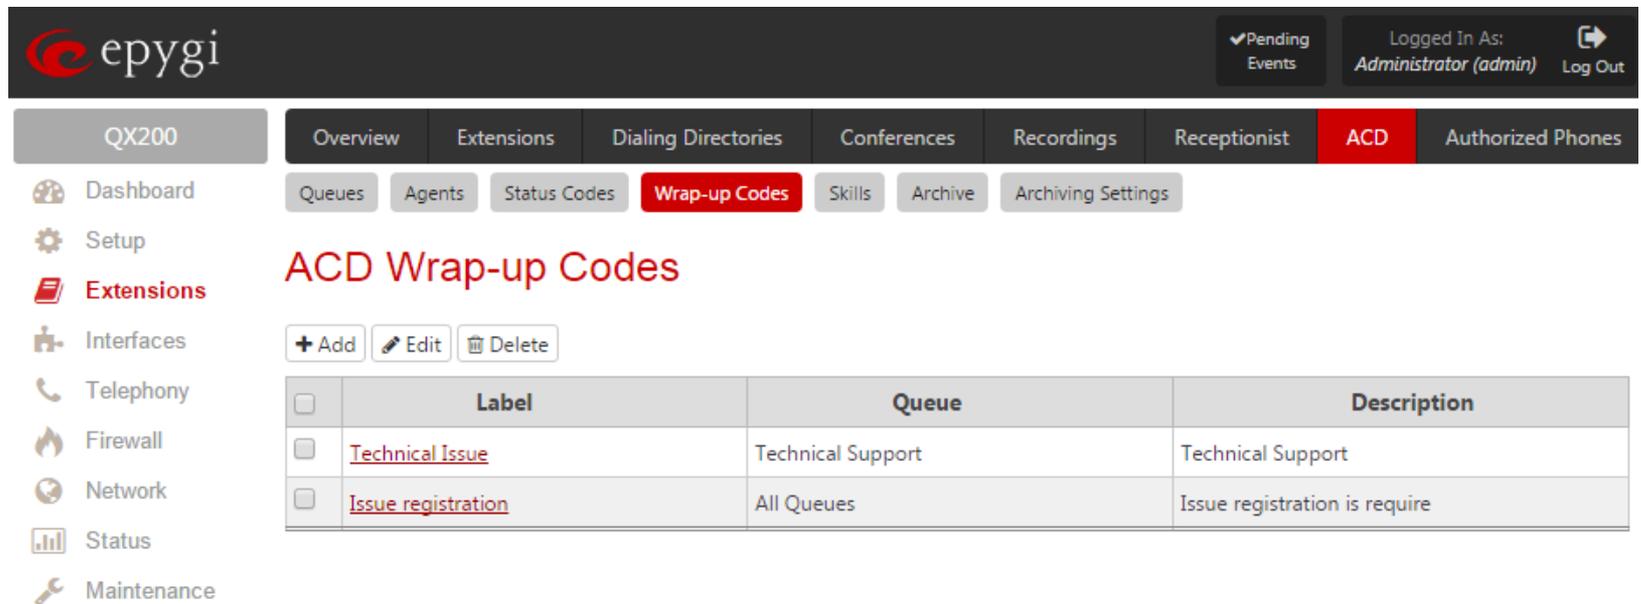

# Adding an Agent to a Queue on QX

The screenshot shows the QX200 web interface. The top navigation bar includes 'Overview', 'Extensions', 'Dialing Directories', 'Conferences', 'Recordings', 'Receptionist', 'ACD', and 'Authorized Phones'. The 'ACD' tab is selected. Below this, there are sub-tabs: 'Queues', 'Agents', 'Status Codes', 'Wrap-up Codes', 'Skills', 'Archive', and 'Archiving Settings'. The 'Queues' sub-tab is selected, and the page title is 'Agents Table of Queue Customer service (900) - Add Entry'. On the left, a sidebar menu lists various system components: Dashboard, Setup, Extensions, Interfaces, Telephony, Firewall, Network, Status, and Maintenance. The main form area contains a 'Go Back' button, an 'Agent' dropdown menu set to 'Andy', and three checkboxes: 'Allow Receiving Calls' (checked), 'Queue Supervisor' (unchecked), and 'Wrap-up: Enable wrap-up' (checked). Below these is a 'Timeout' field with the value '10' and the unit 'sec.'. A 'Save' button is located at the bottom of the form.

Each agent can be added as a member of one or multiple queues. The following parameters should be established for each agent in the selected queue: *Allow Receiving Calls*, *Queue Supervisor*, *Enable Wrap-Up (with Wrap-Up Timeout)*.

# Adding Wrap-Up Codes on QX

The configured ACD wrap-up codes can be used in the Epygi ACD Console web application for labeling calls from a list of pre-determined labels.

The screenshot displays the Epygi ACD Console interface. At the top, the Epygi logo is on the left, and a navigation bar on the right shows 'Pending Events' and 'Logged In As: Administrator (admin) Log Out'. Below the logo, a sidebar lists various system components: Dashboard, Setup, Extensions (highlighted in red), Interfaces, Telephony, Firewall, Network, Status, and Maintenance. The main navigation bar includes 'Overview', 'Extensions', 'Dialing Directories', 'Conferences', 'Recordings', 'Receptionist', 'ACD' (highlighted in red), and 'Authorized Phones'. Under the 'ACD' tab, a sub-menu contains 'Queues', 'Agents', 'Status Codes', 'Wrap-up Codes' (highlighted in red), 'Skills', 'Archive', and 'Archiving Settings'. The 'Wrap-up Codes' page title is displayed in red. Below the title are three buttons: '+ Add', 'Edit', and 'Delete'. A table with three columns: 'Label', 'Queue', and 'Description' is shown. The table contains two entries: 'Technical Issue' linked to 'Technical Support' and 'Issue registration' linked to 'All Queues'.

	Label	Queue	Description
<input type="checkbox"/>	<a href="#">Technical Issue</a>	Technical Support	Technical Support
<input type="checkbox"/>	<a href="#">Issue registration</a>	All Queues	Issue registration is require

# ACD Summary

- ❑ ACD functionality will allow agents to login/logout via phone keypad to the ACD queues. Use \*78 or a programmed button on the phone.
- ❑ If more than one queue is configured an ACD Auto Attendant can be used to allow agents to login/logout to one or more queues using the phone keypad but the EAC is more practical to use for this.
- ❑ Remote extensions can be configured as agents but will have to be on the same QX as the ACD. Very convenient to have for agents located out of the office.
- ❑ The ACD functionality does not require the EAC console but it provides the proper reports and additional features necessary for a call center.
- ❑ A single EAC license is available to allow a supervisor see all stats of the queues and the agents and print reports.

# Epygi ACD Console (EAC)

The ACD information can be processed by agents, supervisors and admins using the Epygi ACD Console, with the following abilities:

- ❑ Display and manage the agents statuses and calls
- ❑ View queues and agent details
- ❑ Produce and view real-time and historical reports
- ❑ Chat with other agents, supervisors and admins
- ❑ Track calls using closure codes and comments
- ❑ WEB based. No need to install any app. Login to the QX.
- ❑ Available on Release 6.1 and subsequent.
- ❑ Old SMR console is no longer supported after 6.1.

Wrap-up Codes

Agent Status

Agents, supervisors and admins can download standard reports to their PC in CSV format to manipulate. These include Call Reports, Wrap Up Code Reports, General System Configuration Reports and Agent Status. Reports can be scheduled.

# (EAC) Chat

The screenshot displays the Epygi chat interface. At the top left is the Epygi logo. To its right are status indicators: a green checkmark, 'Online', 'Away' with a dropdown arrow, and 'My Agent' with a user icon. On the far right is the name 'Andy' with a dropdown arrow. A left sidebar contains navigation items: Dashboard, Queues, Wrap-up Codes, Agents, Extensions, Contacts, Chat (highlighted in red), and Settings. The main chat area is titled 'Chat' and shows a message from 'Andy' at 12:11 PM: 'Can you provide some details, please?'. Below this is a message from 'John'. At the bottom of the chat area is a text input field with the placeholder 'Say something' and a 'Send' button. To the right of the chat area is a 'Chats' panel with a 'New' button and a contact card for 'John'.

Agents, supervisors and admins can communicate with each other via chat for assistance, questions, notifications and more.

# (EAC) Other Screens

- ❑ **Agents** – Real time status of all agents with ability to change status, open chat to an agent and see with icons if on a call or ringing etc. Can filter by status type, extensions
- ❑ **Extensions** – Directory list of all QX extensions including agents. Can start chat with agents or call any other extension.
- ❑ **Contacts** - Personalized contact list.
- ❑ **Settings** – Basic setups and marquee for supervisor.

# ACD and EAC Licensing

**ACD is composed of the following two licensable features, available on all QX IP PBX models:**

- ❑ **ACD** – A single license to enable the basic ACD feature for handling inbound call queuing and distributing the calls to the agents. One time permanent license. (\$650 for QX50 and QX200, \$2500 for QX2000)
  
- ❑ **Epygi ACD Console (EAC)** – A per seat license based on number of concurrent logins to EAC.
  - The number of EAC licenses required is determined by the number of agents and supervisors that will be logged in at the same time to EAC.
  - Does not affect the number agents logged on to ACD. Only affects the number of EAC logins at any given time.
  - One admin. Others can be agents or supervisors.
  - Sold in quantities of five (\$1,500) or ten (\$2,500) simultaneous logins.
  - There is a one license option without ACD to be used by a supervisor. This license is permanent and does not require renewal.
  - Includes the ACD license for call queuing on an annual basis also.
  
- ❑ There is an annual renewal of \$300 (for five) or \$500 (for ten).
  
- ❑ Free SMR tool for ACD is no longer supported from SW 6.1 forward.
